EDUCATION

Thompson Rivers University Bachelor of Computing Science

Computer Science Kamloops, BC, Canada • 2021-2025

SKILLS

- **Languages: Python, JavaScript (ES6+), Java, C#, PHP, SQL, HTML/CSS**
- **Frameworks & Libraries: React, Next.js, Node.js, Scikit-learn, Pandas, NumPy, NLTK, Matplotlib, Seaborn**
- **Tools & Databases: MySQL, Git/GitHub, Unity, Blender, Android Studio, Power BI, REST APIs (Plaid, Finicity)**
- **Concepts: Full-Stack Development, Machine Learning, NLP, Agile Methodology, Procedural Generation**

EXPERIENCE

Books77 Canada

Full-Stack Software Developer (Contract) 2025, September-December

- **Engineered** secure bank-feed integrations using **Plaid and Finicity APIs**, enabling the automated retrieval, synchronization, and categorization of daily banking transactions for commercial clients.
- **Developed** responsive full-stack features utilizing **Next.js, React, Node.js, and MySQL** to seamlessly display financial data within the application dashboard.
- **Enhanced** the automated payroll module by building customizable paystub templates, real-time previews, and an automated email delivery workflow compliant with CRA deductions.
- **Collaborated** directly with the startup founder and a development team in an Agile environment, utilizing **Git/GitHub** for version control, code reviews, and adapting to evolving requirements.

PROJECTS

"Ne Angime" Social Forum 2024

A full-stack social Q&A platform inspired by Reddit and Quora that connects users through global discussions. It features secure user authentication, real-time post interactions, and a dynamic friend-following system.

Tech Stack: React, JavaScript, PHP, MySQL.

Phishing Website Detection 2025

A machine learning pipeline designed to identify and block malicious websites by analyzing URL structures and raw HTML content. I utilized NLP tokenization and trained multiple classification models (Random Forest, SVM) to achieve high predictive accuracy.

Tech Stack: Python, Scikit-learn, Pandas, NumPy, NLTK.

Procedural Store Games & Generators 2024

A suite of 3D procedural generation tools and a highly replayable Unity game called "Store Runner." I engineered a Depth-First Search (DFS) algorithm for infinite maze layouts in Unity and used Blender's Geometry Nodes to dynamically generate optimized store shelf assets. **Tech Stack:** Unity (C#), Blender (Geometry Nodes).

Game Recommendation Bot 2023

A personalized Telegram chatbot that solves user decision paralysis by curating specific video game recommendations. It integrates tailored search algorithms allowing users to filter by tags, average playtimes, and Metacritic ratings.

Tech Stack: Python, Telebot API.

Time Management Mobile App 2023

A productivity mobile application developed to help students optimize their daily schedules and activities. It features automated timetable generation, secure user onboarding, customizable UI themes, and dynamic push notifications to track recurring classes and personal tasks.

Tech Stack: Java, Android Studio.

Signature-Based Behavioral Biometrics 2023

Description: A cybersecurity machine learning project focused on authenticating user identities and detecting forged signatures. I collected a custom dataset of genuine and imitated signatures and trained a Decision Tree classification model to accurately differentiate between legitimate users and fraudulent attempts.

Tech Stack: Python, Scikit-learn (Decision Trees), Data Processing.

SUMMARY

Results-driven Software Developer experienced in full-stack web development (React, Next.js, PHP) and Python-based machine learning pipelines. Demonstrated ability to collaborate directly with clients to build secure API integrations and automated workflows. Open to leveraging strong problem-solving skills in both local and global remote roles.
