SUMMARY

Full-stack developer (BCompSc, Thompson Rivers University, Canada) with contract experience shipping fintech features in Next.js, Node.js and MySQL. Also builds Python machine-learning classifiers and interactive 3D apps in Unity and Three.js.

EXPERIENCE

Full-Stack Software Developer (Contract), Books77 | *Canada* Sep 2025 – Dec 2025

- Integrated the **Plaid** and **Finicity** banking APIs to pull, sync and categorize business clients' daily transactions.
- Built dashboard features in **Next.js, React, Node.js and MySQL** that display each client's financial data.
- Extended the payroll module with custom paystub templates, live previews, automatic email delivery and CRA-compliant deductions.
- Worked with the founder and dev team in an Agile process, using Git/GitHub pull requests and code reviews.

PROJECTS

Phishing Website Detector | *Python, scikit-learn, pandas, BeautifulSoup* 2024

- Built a classifier that flags phishing sites from a page's live HTML (HTTPS, meta tags, social links, image and script counts).
- Trained on a Kaggle dataset of 176,000 URLs and compared logistic regression, decision tree and random forest models; the decision tree reached **98.4% test accuracy**.
- Used only features that are cheap to compute at page load, so the model can run in a real-time browser extension.

Ne Angime: Social Q&A Platform | *JavaScript, React, PHP, MySQL* 2023

- Built a Reddit/Quora-style site solo in under two weeks: accounts, posts, answers, likes, friend search, following.
- Designed the MySQL database and PHP backend, and wrote a test procedure for every user-facing feature.

Store Runner: Procedural 3D Game | *Unity, C#, Blender* 2024

- Built a first-person Unity game that uses depth-first search to generate a new store-shelf maze on every run, with a randomly placed goal item and NPCs that navigate with NavMesh.
- Generated the store-shelf models procedurally with Blender Geometry Nodes.
- Playtested with three players and turned their feedback into a prioritized list of design changes.

Interactive 3D Portfolio | *JavaScript, Three.js, GSAP, Vite* 2026

- 3D desk scene where visitors open folders to read project reports and slides; raycast hover and GSAP animation.

Game Recommendation Bot | *Python, pandas, Telegram Bot API* 2023

- Telegram bot with 10 commands that recommends games by tags and Metacritic rating, and filters by year and playtime.

Signature Forgery Detection | *Python, scikit-learn* 2023

- Collected a dataset of genuine and forged signatures and trained a decision-tree classifier to tell them apart.

Android Apps | *Java, Android Studio* 2023

- QazaqAlphabet (Kazakh alphabet with audio and a listening quiz) and a student timetable app with notifications.

SKILLS

Programming: JavaScript (ES6+), Python, Java, C#, PHP, SQL, HTML/CSS
Web: React, Next.js, Node.js, REST APIs, MySQL, Three.js
Data & ML: scikit-learn, pandas, NumPy, NLTK, Matplotlib, Seaborn, Power BI
Tools: Git/GitHub, Unity, Blender, Android Studio, Vite
Spoken: English (fluent, IELTS 7.5), Russian (native), Kazakh (native)

EDUCATION

Bachelor of Computing Science | *Thompson Rivers University, Kamloops, Canada* 2021 – 2025
Relevant courses: Machine Learning, Computer Network Security, Mobile App Development, Procedural Content Generation
